Winter Seed Wheat - Winter Seed Rye

PEDIGREE STRAINS—CLOSELY GRADED, FREE FROM CHEAT, SMUT, GARLIC OR COCKLE

LANCASTER-FULCASTER (Bearded)

Lancaster-Fulcaster represents the development of many years of careful selection of the old variety Fulcaster, which over a long period of years held first place as a big yielding wheat.

It is a reliable yielder, year after year. In years when all conditions are against successful crops, this variety makes good average yields in spite of adverse conditions. Farmers who have not been successful in raising even fair crops of wheat on rather thin soils, should grow this variety, and produce a satisfactory crop of straw and a surprising crop of grain.

The grain is of the finest quality, a genuine Longberry, dark red and hard and even on poor soils the grain will be of full size. There is no wheat grown that is better liked by millers.

Its extreme hardiness will carry it safely through severe winters and its vigorous constitution withstands attacks of insect pests and diseases.

In the Pennsylvania State College Experimental Station’s four years’ tests of seventeen varieties of wheat, Lancaster-Fulcaster led all bearded sorts, yielding on an average of 33.8 bushels per acre for the four years. Sow 1½ bushels per acre.

Price, peck 90c.; bushel of 60 lbs., $3.00; 10-bushel lots, $2.90 per bushel.

LEAP’S PROLIFIC (Beardless)

Leap’s Prolific Wheat was originated about ten years ago in the Shenandoah Valley of Virginia. Since then over one hundred thousand bushels have been distributed among the wheat growers throughout the Eastern States. It has gained great popularity since its introduction. Reports from various parts of the country give yields averaging from 41 to 46 bushels to the acre. These yields were produced not on small sample trials, but on large acreages. It is extremely hardy, having survived and produced a perfect crop after the fields were covered with ice during the winter.

It roots deeply and stools vigorously. It ripens early, with grain and straw maturing at the same time. The heads are beardless, glistening white in color, compactly built, filled with heavy, plump, grains from base to tip, well enclosed, thereby protecting them from unfavorable weather conditions and also preventing self-shelling when cutting.

The grain is large, dark red of the Longberry type. The straw is long, stiff and very uniform, yielding a large tonnage to the acre. It is particularly desirable for its milling qualities. 1½ bushels are required to sow an acre. (See engraving.)

Price, peck 90c.; bushel of 60 lbs., $3.00; 10-bushel lots, $2.90 per bushel.

RURAL NEW YORKER NO. 6 (Beardless)

This beardless variety is a hybrid between Rye and Armstrong Wheat, though all traces of Rye have disappeared and it now appears a handsome, beardless Wheat. It succeeds and produces heavy crops on poor, thin land, and it also has extreme hardiness to recommend it. The gold-colored straw is very thick and strong, easily supporting the heavy grain without breaking. The large amber kernels are placed four to a breast, eight breasts to a side, with long symmetrical heads having a brown chaff. One of our growers says:

"It stools as strong as any wheat I ever saw. It had a vigorous, healthy growth all the season, and stood well without lodging. It is very hardy." Sow 1½ bushels per acre.

Price, peck 90c.; bushel of 60 lbs., $3.00; 10-bushel lots, $2.90 per bushel.

ROSENY RYE

A New Large Yielding Rye That Thrives Well On All Soils

This remarkable Rye is extremely hardy due to its Russian origin. Rosen Rye was brought to its present high state of development at the Michigan Agricultural College, where it has proven superior to all other sorts in growth and productivity.

While the average yield for rye throughout the United States is only 15 bushels to the acre, Rosen Rye has yielded up to 45 bushels to the acre. The plant is extremely vigorous, producing a luxuriant stiff straw from large stools. On account of its vigorous stooling habit only one bushel will be required to sow an acre.

The grain is extremely attractive, plump, and heavy.

One of the principal merits of this valuable grain, is that it thrives equally as well on light soils as it does on heavy soils. It has proved to be a dependable sort by producing large crops in unfavorable seasons. Sow 1½ bushels per acre. (See engraving.)

Price, quart 25c.; peck 80c.; bushel of 56 lbs., $2.50; 10-bushel lots, $2.40 per bushel.

GIANT WINTER RYE

A remarkably heavy cropping Rye, having in fair tests out-yielded many other varieties both in straw and grain. The straw is of uniform length, strong and of extraordinary stiffness.

Price, quart 25c.; peck 80c.; bushel of 56 lbs., $2.60; 10-bushel lots, $2.40 per bushel.

WINTER RYE

The variety most commonly cultivated, whether sown for grain, straw or cutting green.

Price, quart 25c.; peck 80c.; bushel of 56 lbs., $2.50; 10-bushel lots, $2.40 per bushel.

Prices subject to change without notice.
Henderson’s Special Grass Mixtures for Hay and Pasture

Produce Wonderful Hay Crops and Luxuriant Pasture Lasting Many Years

HAY AND PERMANENT PASTURE

Special Grass Seed Mixture

This mixture is made up of native and acclimated foreign Grasses thoroughly blended, and improved upon during trials under widely varied conditions, soils and localities for several years until practically perfect, our aim being to produce, under the extremes of the American climate, a Permanent dense and deep-rooting turf that will yield year after year the maximum quantity of foliage. These Grasses are of superior quality, inviting, sweet and nourishing, whether used as hay or pasture.

In preparing these Mixtures the greatest care is exercised in selecting such varieties as are suited to the soil to be sown and are likely to realize the object in view. Therefore a description of the soil whether Light, Medium or Heavy, and climate, and if with or without a grain crop, should accompany each order. (See illustration.) Sow 40 lbs. per acre.

Price, lb. 50c; 10 lbs. $4.00; 100 lbs. $30.00; transportation paid.

PERMANENT PASTURE

Special Grass Seed Mixture

There is no more important part of a farm than a good pasture, and that can only be obtained by the use of the proper Grasses, varieties that have different root formations and different habits and season of growth, in order to maintain a rich, close turf throughout the entire season. Timothy should never be used for pasture because it will not stand trampling, and soon runs out when heavily pastured and at best is short-lived, as compared with the permanent Grasses used in our Special Mixtures. These Mixtures contain over a dozen of the best permanent Grasses, both American-grown and imported. All are permanent, and when once established will last indefinitely, if the fertility of the soil is kept up by occasional top-dressing. Sow 40 lbs. per acre.

Price, lb. 50c; 10 lbs. $4.00; 100 lbs. $30.00; transportation paid.

Full directions for sowing enclosed in every bag. In ordering, state whether for Light Soils, Heavy Soils or Medium.

March 7th, 1935

A much delayed testimony in regard to some grass seed purchased from you forty-four years ago, known as Permanent Pasture. This lot has been in pasture ever since I put in the seed, and is still a No. A-1 pasture, in fact, the best pasture on the farm. It had always been known up to this time, as a hard lot to keep in grass.

Ambrose M. Culver

Amenta, N. Y.

The Purchaser Pays Transportation Charges on Farm Seeds Except Where Noted.

Prices Are Subject to Change Without Notice.

Farm Managers—We have always on hand applications by competent men for positions as farm and estate managers, men who have been trained in the business and are well posted on agriculture generally, also the raising and care of live stock. We will be very pleased to enter into correspondence with those who require the services of such. We make no charge for this service, either to employer or employee.

All Gardeners of Experience know that success depends largely on weather conditions and proper cultivation, so in accordance with the universal custom of the seed trade PETER HENDERSON & CO., gives no warranty, express or implied, as to description, quality, productiveness, or any other matter, of any Seeds. Bulbs, Roots or Plants they send out, and they will not be in any way responsible for the crop.
Henderson's Superior Recleaned Grasses

For Pasture, Hay, Turf on Golf Courses, Athletic Fields, Etc., Etc.

FESCUE, HARD (Festuca Duraelscens). A variety of Sheep's Fescue. Grows in dense, wiry carpets of dark green and is used in the shade. For the "Rough" where the soil is thin or sandy, it thrives well. Price, lb. 75c; 10 lb. $7.00; 25 lb. $16.00; 100 lb. $60.00.

FESCUE, MEADOW (Festuca Pratensis). This grass is also called English Grass and in the South, Randall's Grass, flat and bright green. Grows to a height of 30 inches when left uncut. For wet soils few grasses are equal to Meadow Fescue. Price, lb. 40c; 10 lb. $4.50; 25 lb. $7.50; 100 lb. $25.00.

FESCUE, RED (Festuca Rubra). Forms a close and lasting turf of dark green, specially adapted for dry sandy soils. It resists extreme droughts and thrives on inferior soils, gravelly banks and exposed hill-sides, also in hot climates. It is preferred to the Bents on the sandy type of soil in the Northern States for Putting Greens. Lime need not be used where this grass is desired. Price, lb. 75c; 10 lb. $7.00; 25 lb. $16.00; 100 lb. $60.00.

FESCUE, SHEEP'S (Festuca Ovina). It is a bunch grass, forming dense tufts 3 to 6 inches in diameter with wire-like leaves 2 to 4 inches long of bluish gray. It is an excellent grass to grow on poor sandy soils for Fairways, when mixed with other grasses, as it helps to make a durable sward. Sown alone, it is too bunched. For the "Rough" on sandy dry soil, it is excellent. Price, lb. 75c; 10 lb. $7.00; 25 lb. $16.00; 100 lb. $60.00.

FESCUE, VARIOUS LEAVED (Festuca Heterophylla). This grass is a native of Europe: the leaves fine and dark green and the plant is of a tufted habit. Though slightly creeping, it does best on soils rich in humus. Used to a limited extent on Fairways and Tees. Price, lb. $1.50; 10 lb. $14.00.

FESCUE, TALL MEADOW (Festuca Elatior). Early, nutritive and productive in pastures on clay soils. Price, lb. 75c; 10 lb. $7.00.

FESCUES, DOMESTIC. A mixture of Italian and English grown in the United States. Price, lb. 25c; 10 lb. $2.25; 25 lb. $4.50; 100 lb. $15.00.

FESCUE, ENGLISH (Lolium Perenne). It grows rapidly and makes a good covering in a month. Price, lb. 4c; 10 lb. $3.75; 25 lb. $8.00; 100 lb. $28.00.

FESCUE, ITALIAN (Lolium Italicum). Like Perennial Rye Grass, it is a rapid grower and is treated as an annual. It is used largely in the South to sow over the Bermuda sod as soon as it turns brown. Used in this way, it makes an exceedingly fine cover for the winter. Price, lb. 20c; 10 lb. $3.50; 25 lb. $5.50; 100 lb. $20.00.

FESCUE, PACEY'S PERENNIAL (Lolium Perenne Pacey's). This variety used in a mixture is an excellent "nurse" grass where a quick cover is desired. It makes a dense permanent turf which stands heat and drought. Price, lb. 75c; 10 lb. $7.50; 25 lb. $16.00.

SWEET VERNAL, TRUE PERENNIAL (Anthoxanthera Odoratum). Emits an agreeable odor, which it imparts to the hay. Price, lb. 50c.

TALL MEADOW OAT (Avena Lutetiana). A grass peculiarly adapted for cutting for hay, in small quantities. Price, lb. 5c; 10 lb. $0.50; 25 lb. $1.25; 100 lb. $5.00.

YARROW (Archiebe Millefolium). Used to a great extent on Ties, it is a deep-rooting perennial and withstands drought. Sown alone, or with grass mixtures. Price, lb. 5c.

We Pay Transportation Charges on All Grass Seeds by Express or Freight at Our Option.
CLOVERS

Henderson’s Medium Red Clover

(Trifolium pratense)

DOMESTIC GROWN

Common or Medium Clover, June Clover

Red Clover according to locality is a biennial or short-lived perennial. It grows one to two feet in height and usually makes two crops a year, yielding two to three tons of cured hay per acre. Clover hay is very nutritious and much preferred for stock fed on it require less grain; chopped and steamed it is a good substitute for green food for poultry during the winter. As pasture all animals thrive on it, particularly cattle, sheep and pigs, and as a green manuring and feeding crop it is very valuable, adding humus and nitrogen to the soil. In Northern States Red Clover seed is usually sown in the spring; the earlier the better. If grown alone, use 12 to 14 pounds of seed per acre if broadcast and cover not over half an inch deep. Red Clover may also be seeded with a number of different grasses as Timothy, Orchard Grass or Tall Oat Grass, but usually it is grown with Timothy, 8 to 10 pounds of Clover and half a bushel of Timothy seed being sown per acre. A very satisfactory combination is 5 pounds of Red Clover, 5 pounds of Alsike Clover, 20 pounds of Timothy and 5 pounds of Pinky Red Top per acre. This makes a fine quality of marketable hay and the field does not run out so soon as Clover and Timothy alone. (See engraving.)

Price, lb. $5.00; 25 lbs. $10.00; 100 lbs. $38.00.

Mammoth or PEAS CLOVER

(Trifolium pratense perenne)

DOMESTIC GROWN

Perennial. Time of flowering, July. Height, 2 to 3 feet. Quite distinct from the common Red Clover, being of larger and coarser growth and valuable for purposes for which the latter is entirely unsuited. It is a biennial and is two or three weeks later than common Red Clover. Of very robust growth, yielding enormous bulk valuable for reclaiming exhausted lands. Sow (if alone) about 12 lbs. per acre, weight, 60 lbs. per bushel. (See engraving.)

Price, lb. $5.00; 25 lbs. $11.50; 100 lbs. $40.00.

SWEDISH CLOVER

Aliske or Hybrid Clover

(Trifolium hybridum)

Perennial. Time of flowering, July and August. Aliske or Swedish Clover is a hybrid intermediate in growth and appearance between Red and White Clovers. The blossoms are pinkish white. It is a perennial and one of the hardest of all Clovers, thriving particularly well in cool and cold climates and stands freezing well, but also adapts itself to most climates where Clovers grow, and will grow in moister soil than Red Clover, in fact, has produced splendid crops under irrigation. Plants attain a height of one to two feet; stems and leaves, though smaller than those of Red Clover, are much more numerous, making hay of fine texture. Aliske frequently produces good crops on soils on which Red Clover will not grow. We strongly advise farmers to add 2 or 3 lbs. per acre to their usual seeding of Red Clover and Timothy. Sow (if alone) 8 lbs per acre, weight, 60 lbs. per bushel. (See engraving.)

Price, lb. $5.00; 25 lbs. $11.50; 100 lbs. $40.00.

White Bohkara Clover

(Sweet Clover

(Alyssum albus)

Biennial. Time of flowering, June to September. Height, 3 to 5 feet.

A perennial leguminous plant of tall, shrub-like growth, occasionally grown as a forage plant, and often for bees; the numerous small white flowers possess a sweet, honey-like fragrance. The importance of Bokhara Clover, however, is its value for plowing under for green manuring, particularly to prepare poor soils where it is difficult to get other crops to grow. Sow 10 lbs. per acre; weight, 60 lbs. per bushel.

Price, lb. $5.00; 25 lbs. $7.50; 100 lbs. $25.00.

Korean Lespedeza

An annual leguminous plant considerably grown, particularly in the South, as a summer pasture, green forage and hay crop. It also has much value as a soil eroder when plowed under as green manure. It will flourish on poor and exhausted soils, too poor to produce profitable crops of any other forage plant. Sow 14 lbs. per acre; weight, 20 lbs. per bushel.

Price, lb. $5.00; 25 lbs. $7.50; 100 lbs. $25.00.

DUTCH or HONEY Suckle

White Clover

(Trifolium repens)

White Clover is a valuable addition to mixtures for permanent pastures, as it furnishes considerable plant food to the other Grasses composing such mixtures.

In mixtures for lawns White Clover is always used, as there is no plant more suitable for the formation of a dense sward, and also to prevent the washing out of soil during heavy rains. Sow (if alone) 8 lbs. per acre; weight, per bushel, 60 lbs.

Price, lb. $7.00; 25 lbs. $16.25; 100 lbs. $60.00.

The Purchaser Pays Transportation Charges on Farm Seeds Except Where Noted.

Prices Subject to Change Without Notice.

Henderson's Superior Reclained

Crimson or Scarlet Clover

(Trifolium incarnatum)

Plowing under a good crop of Scarlet Clover is equivalent to 20 tons of stable manure per acre and even if the Clover be harvested or pastured, the benefits derived from the wonderful nitrogenous root formation will alone many times repay the cost of seed and labor.

Crimson Clover cut when coming into bloom makes hay richer in protein than Red Clover, and the yield on average soils is two to three tons per acre. It is especially adapted for green forage and silage and is much relished by dairy stocks. Cut green before flowers mature.

Crimson Clover should not be fed after the flowers mature for the bolls of the calyx are apt to form "hair balls" in the stomachs of animals.

Sow at the rate of 15 pounds of seed per acre, either broadcast or drilled. Cover lightly with a barrow. If sown too early, especially in Southern States, it is apt to mature and form seeds the same season without making full growth. In the latitude of New York City sow from July 15 to September 15, and in the South as late as October. Time of flowering is June; height, 2 feet.

Price, lb. 40c.; 10 lbs. $3.50; 25 lbs. $7.50; 100 lbs. $25.00.

White Bohkara Clover

(Sweet Clover)

(Alyssum albus)

Biennial. Time of flowering, June to September. Height, 3 to 5 feet.

A perennial leguminous plant of tall, shrub-like growth, occasionally grown as a forage plant, and often for bees; the numerous small white flowers possess a sweet, honey-like fragrance. The importance of Bokhara Clover, however, is its value for plowing under for green manuring, particularly to prepare poor soils where it is difficult to get other crops to grow. Sow 10 lbs. per acre; weight, 60 lbs. per bushel.

Price, lb. 40c.; 10 lbs. $3.50; 25 lbs. $7.50; 100 lbs. $20.00.

Korean Lespedeza

An annual leguminous plant considerably grown, particularly in the South, as a summer pasture, green forage and hay crop. It also has much value as a soil eroder when plowed under as green mixture. It will flourish on poor and exhausted soils, too poor to produce profitable crops of any other forage plant. Sow 14 lbs. per acre; weight, 20 lbs. per bushel.

Price, lb. 40c.; 10 lbs. $3.50; 25 lbs. $7.50; 100 lbs. $20.00.

DUTCH or HONEY Suckle

White Clover

(Trifolium repens)

White Clover is a valuable addition to mixtures for permanent pastures, as it furnishes considerable plant food to the other Grasses composing such mixtures.

In mixtures for lawns White Clover is always used, as there is no plant more suitable for the formation of a dense sward, and also to prevent the washing out of soil during heavy rains. Sow (if alone) 8 lbs. per acre; weight, per bushel, 60 lbs.

Price, lb. $7.00; 25 lbs. $16.25; 100 lbs. $60.00.
GRIMM ALFALFA
The Hardest Alfalfa Known
DOMESTIC GROWN

The attention of the Minnesota experiment station was called to this Alfalfa in 1901, and by careful experimentation Grimm Alfalfa was found to be far superior to common kinds in withstanding unfavorable winters. This strain of Alfalfa seed not only endures extremely low temperature, but it can be cut with greater safety in the fall, and will bear more abuse in the way of pasturage than any other forage plant. Grimm Alfalfa has larger crowns, and a more spreading root system than the ordinary Alfalfa. It is also claimed that it will yield from ten to fifteen per cent more than any other variety, and will start and thrive in undrained wet locations, where the ordinary sort was tried unsuccessfully. One of the characteristics of the Grimm Alfalfa is that some of the plants produce peculiar greenish-yellow flowers. Sow 30 lbs. per acre.

Price, lb. 70c.; 10 lbs., $6.50; 25 lbs., $15.00; 100 lbs., $55.00. purchaser paying transportation.

HENDERSONS’ RECLEANED
NORTHERN GROWN ALFALFA (Medicago sativa)

DOMESTIC GROWN

A Clover-like leguminous plant of great importance as a hay and forage crop, nutritious and rich in protein elements. It grows 2 to 5 feet high and sends roots 3, 10, 20, and sometimes 30 feet into the subsoil. It needs one season to become established, after which it yields enormous crops annually for many years. 3 or 4 cuttings per season, aggregating 4 to 6 tons cured hay per acre, are harvested, according to conditions and locality. It does well on all good, rich soils (except heavy clay), if well drained, or overlying a permeable subsoil; on calcareous soil it thrives especially well. Alfalfa is one of the best cover crops for orchards. Our strain of seed is grown in far Northern regions, where plants have to endure extreme cold and wind, thrive in those high altitudes. Our experience—and that of our customers—has shown that such seed is undoubtedly the best for the North and Eastern States. Before offering this seed to our customers for sale, it is thoroughly cleaned by the most modern seed cleaning machinery. By this process we separate the sound, perfect seeds from all rubbish and light, imperfect seeds. Sow in the Northern States during June, July or August, 30 to 40 lbs. of seed per acre if broadcasted, 25 or to 30 lbs. if drilled. In the South sow in February or September. (See engraving.)

Price, lb. 60c.; 10 lbs., $5.50; 25 lbs., $12.50; 100 lbs., $45.00. purchaser paying transportation.

VETCH, SAND or WINTER (Vicia villosa)
The Best Legume for Sandy Soils

It is the earliest crop for cutting, and a full crop can be taken off the land in time for planting spring crops. Being much harder than Scarlet Clover, this is the forage plant to sow in the Northern States, where Scarlet Clover winter kills, though it is equally valuable in the South.

Although Sand Vetch succeeds on poor, shady soils, it is, naturally, more vigorous on better land. Under such conditions the plant produces numerous branches 3 to 6 feet long. Sand Vetch is hardly all over the United States, and in most places remains green all winter. The crop may be seeded, either from the middle of August to the middle of September, or in the spring from the middle of April to the middle of May.

Sown in the fall it should be mixed with Mammoth Red Clover or Rye to serve as a support for the vines, thus keeping the forage off the ground.

If sown in the spring it may be mixed with Oats or Barley. Fall sown crops furnish some forage before winter comes, and as growth starts very early in the spring it can be pastured, cut for hay, or turned under to renovate the soil.

The foremost orchardists highly recommend Sand Vetch as a cover crop. Soluble plant food in porous soils leaches away in considerable amounts during the late fall and early spring, when the roots of trees are not actively foraging for it. Owing to the fact that it grows late in the fall, and to its ability to live over winter, Sand Vetch is certainly the best cover crop for orchards. (See engraving.)

Sow 50 lbs. per acre, with one-half bushel of Rye or Wheat.

Price, lb. 40c.; 10 lbs., $3.00; 50 lbs., $12.50; 100 lbs., $22.00.

TRUE DWARF ESSEX RAPE

Sow in the North From April to End of August and in the South During September and October

In the United States we have millions of acres of land that annually lie idle or run to weeds the latter part of the season, after the grain, potato and hay crops have been harvested, a large portion of which might be made to produce one of the finest feeds imaginable, and in the greatest abundance, lbs., and in the greatest abundance, at a time when sheep and hogs are roaming through bare pastures in search of a scanty living. Under favorable conditions Rape is ready for pasturing sheep or cattle within six weeks from time of sowing, and on an average one acre will carry twenty to fifteen sheep six weeks to two months. When on the Rape they should at all times have access to salt; but water is not necessary. There are several varieties of Rape, but care should be taken to procure the DWARF ESSEX, or English, as it is sometimes called, which does not seed the same season as sown, unless in some exceptional cases, as when sown too early and the young plant is touched by frost. In Northern States it should be sown from April to end of August for fall pasturing, but as it thrives best in cool weather, it should not be sown in the Southern States until September or October for winter pasture. In the latitude of New York it should be sown in April, or in July or August. Its fattening properties are probably twice as good as those of Clover, and for sheep the feed and value of Rape excels all other plants we know of. To secure the best results Rape should be sown in drills. Sow 4 lbs. per acre broadcast, 2 to 3 lbs. per acre in drills.

Price, lb. 30c.; 10 lbs., $2.75; 25 lbs., $5.50; 100 lbs., $15.00.

The Purchaser Pays Transportation Charges on Farm Seeds Except Where Noted.

The Early Autumn Is an Ideal Time for Sowing Lawn Grasses

Henderson's Lawn Grass Seed Mixtures

THERE IS A HENDERSON LAWN GRASS SEED MIXTURE FOR EVERY PURPOSE

SHADY NOOK
Lawn Grass Seed for shady places. Price, 1/2 lb., 40c.; 1 lb., 70c.; 3 lbs., $2.00; 5 lbs., $3.25; 10 lbs., $6.25; 20 lbs., $12.00; 100 lbs., $58.00, transportation paid.

SUNNY SOUTH
Lawn Grass Seed for Southern States. Price, 1/2 lb., 40c.; 1 lb., 70c.; 3 lbs., $2.00; 5 lbs., $3.25; 10 lbs., $6.25; 20 lbs., $12.00; 100 lbs., $58.00, transportation paid.

SEA SIDE
Lawn Grass Seed for sandy soil and saline surroundings. Price, 1/2 lb., 35c.; 1 lb., 60c.; 3 lbs., $1.75; 5 lbs., $2.75; 10 lbs., $5.00; 20 lbs., $9.00; 100 lbs., $42.50, transportation paid.

TERRACE SOD
Lawn Grass Seed for terrace and embankments. Price, 1/2 lb., 40c.; 1 lb., 70c.; 3 lbs., $2.00; 5 lbs., $3.25; 10 lbs., $6.25; 20 lbs., $12.00; 100 lbs., $58.00, transportation paid.

TOUGH TURF
Grass Mixture for tennis courts, croquet grounds and bowling greens. Price, 1/2 lb., 35c.; 1 lb., 60c.; 3 lbs., $1.75; 5 lbs., $2.75; 10 lbs., $5.00; 20 lbs., $9.00; 100 lbs., $42.50, transportation paid.

Special "Bent Formula" Lawn Grass Seed Mixture

It Makes Every Lawn Like a Putting Green and Has Aroused Great Enthusiasm Among All Lovers of a Perfect Lawn

On account of the growing popularity of golf in recent years, the question has many times been put to us by our customers, "Why can't I have a lawn that looks like a Putting Green?" Our answer to this was to make up a combination of the finest re-cleaned grasses, using as a basis for this mixture the imported and domestic Bent Grasses which are so largely used in the finer Putting Greens of today.

We are very pleased to announce that our sales of this mixture have more than trebled since we offered it to our customers, and there seems to be no doubt that again this year there will be another great increase in the demand for this special formula.

A lawn seeded with this mixture and properly cared for will in truth make every lawn a Putting Green. On a lawn of this type, Clock Golf and other lawn games may be enjoyably played.

It is imperative in maintaining a lawn of this type, that the grass should be kept cut short and well rolled all through the season. Starvation of the grass plants is the most frequent cause of unsatisfactory lawns, and grass needs constant small applications of fertilizer and plenty of water to maintain a perfect lawn. Also, every spring apply a dressing of Henderson's Lawn Enricher. Broadcast this, using ten pounds for each 200 square feet, and water it thoroughly with a hose.

We advise seeding at the rate of one pound to cover a space of 10 x 20 or 200 square feet. Price, 1 lb. 95c.; 5 lbs. $4.50; 10 lbs., $8.50; 25 lbs. $20.00; 100-lb. lots and upward, $70.00 per 100 lbs., transportation paid in the U. S.
Autumn Is the Best Time to Make or Renovate a Lawn
The “HENDERSON” Lawn Grass Seed

Sown in the Autumn, produces Enduring Turf which will withstand Summer Droughts

For a long time we have urged the Fall planting of grass seed, for either making a new lawn, or renovating the old one, and year after year the results have shown the wisdom of following the natural way.

Grass seed planted in the Fall germinates rapidly, and will attain a strong growth by the time frost comes. Even with the rigorous Northern winters there is very little danger of its being injured by the cold weather; in fact, our advice is not to protect it in any way.

Even before the frost is completely out of the ground, we find that the young grass responds to the first warm days. Weed seeds from the previous Summer will not start until weeks after the Fall-sown grass has become strong and vigorous enough to withstand their more rapid growth; in fact, if it has been planted thickly, the grass will often crowd out the weeds.

Any lawn will be improved by a light sowing of the appropriate Henderson mixture during early September, together with an application of one of the Henderson fertilizers. You will find a list of our various grass mixtures for particular places on Page 7 and whether you are going to make a new lawn, or renovate the old, we strongly urge your doing so at once.

A copy of our pamphlet “How to Make a Lawn” is sent with every package of the Henderson Lawn Grass Seed.

In the latitude of New York, the seed may be sown up to the first of October, farther south later, and farther north up to about September first.

The most valuable and longest lasting improvement to the home grounds, is a properly built lawn sown with The Henderson Lawn Grass Seed. Customers tell us that lawns made a score or more years with our seed are as beautiful today, as they were in their first flush of youth.

The importance of a good lawn is stressed by the high scoring they receive in Metropolitan and National Garden Contests.

### Prices of the “Henderson” Lawn Grass Seed (Delivered Transportation Paid)

<table>

For renovating use half these quantities.

Our new booklet “How to Make a Lawn” enclosed in every package, contains full instructions how to make a new lawn or renovate an old one.

**White Dutch Clover.** An excellent clover for lawns, makes a close compact growth, covering the ground like a carpet. It also prevents the washing out of soil during heavy rains. Thrives well on all soils. Price, ¼ lb., 25¢; ½ lb., 40¢; 1 lb., 75¢; 10 lbs., $7.00; 25 lbs., $16.25; 100 lbs., $60.00.

We give full instructions for making new lawns or re-seeding old ones in our booklet “How to Make a Lawn.” This is enclosed in every package sent out by us.

**HENDERSON’S LAWN ENRICHER and Top Dresser**

For New and Old Lawns, Athletic Fields, Golf Courses, etc. It is Odorless, and Quickly Induces a Luxuriant Green Growth.

The constant mowing of grass and removal of clippings also removes a proportion of digested plant food. Therefore, if the luxuriance of a lawn is to be maintained, it must be top dressed at least once a year with suitable fertilizer. The Henderson Lawn Enricher is a clear, lawn dressing which never fails in inducing a rapid and rich green growth.

For forming a new lawn a 10-lb. package is sufficient to go over an area of 200 square feet, or 1,000 to 1,500 lbs. per acre, or a smaller quantity for renovating an old lawn. Apply broadcast with machine or by hand as evenly as possible on a quiet day and preferably just before rain. If applied during the summer use half of the quantity and water in thoroughly with a hose.

**SPECIAL NOTICE.**—We prepay transportation charges on Fertilizers by parcel post, express or freight at our option within the first and second zones (150 miles of New York City). Purchasers, beyond these zones, pay transportation charges.

**BONE MEAL**

Henderson's Medium Fine

Excellent for Top Dressing Lawns

It is for its slow disintegrating and long lasting qualities that Bone Meal is so very desirable for fertilizing all hard wood plants, including flowering shrubs, fruit bushes, trees, and the like.

As there is absolutely no danger of burning or causing rot in fleshly bulbs, including Tulips, Hyacinths, etc., a liberal application of Bone Meal mixed into the soil before planting will be amply repaid for by the remarkable size and brilliancy of the flowers obtained.

For Lawns it is a dependable fertilizer, as it contains the essential elements that grass requires. It may be broadcast as a top-dressing at any time either in early spring or during the growing season. Quantity required. For lawns, pasture and mowing lands 10 lbs. to 200 square feet or ½ to 1 ton per acre. For trees and vines, 2 to 4 lbs. each. For field and garden crops, ½ to 1 ton broadcast and banded in. For rose beds, pot plants, etc., one part to about fifteen of soil.
